

ABSTRACT OF THE DISCLOSURE

A polymeric fluorescent substance exhibiting fluorescence in the solid state, having a polystyrene reduced number-average molecular weight of 1×10^3 to 1×10^8 , and comprising one or more repeating units of formula (1) and one or more repeating units of formula (8),

wherein Ar_1 represents a specific arylene or a divalent heterocyclic compound group, and Ar_2 represent an arylene or a divalent heterocyclic compound group other than Ar_1 . By using the polymeric fluorescent substance, a high performance polymer LED can easily be obtained.
